

INTRODUCTION

1. What is mysql ?

MySQL is an open-source relational database management system (RDBMS) that uses Structured Query Language (SQL) for managing and manipulating data. Developed by MySQL AB, it is now owned by Oracle Corporation. MySQL is widely used for building web applications and is known for its reliability, ease of use, and strong community support. It supports various platforms and is commonly used in conjunction with PHP to create dynamic web pages. MySQL is a popular choice for businesses and developers seeking a robust, scalable, and cost-effective database solution.

2. How to use sql ?

To build a website that shows data from a database, you will need

- An RDBMS database program (i.e. MS Access, SQL Server, MySQL)
- To use a server-side scripting language, like PHP or ASP
- To use SQL to get the data you want
- To use HTML / CSS to style the page
